Release 0.0.1

Michael Joseph

July 11, 2012

CONTENTS

1	Installation	3
2	Usage	5
3	API Documentation	7
	Python Module Index	9

authoritarian is a Python client implementation of the [AuthorityLabs Partner API](#).

This is a light [requests](#)-based wrapper over the API that provides the following features:

- validation of supported AuthorityLabs [search engines](#)
- validation of support AuthorityLabs [locales](#)

INSTALLATION

```
pip install authoritarian
```

USAGE

```
import authoritarian
api_key = 'da39a3ee5e6b4b0d3255'
account_id = '123'
authoritarian.initialise(api_key, account_id)

# returns https://gist.github.com/1201594#file_al_partner_api_accounts.json
status_json = authoritarian.account_status()

keyword = 'your country needs you'
engine = 'google'
locale = 'en-us'
success = authoritarian.search(keyword, engine, locale)

success = authoritarian.search(keyword, engine, locale, immediate=True)

rank_date = '2012-07-07'
# returns https://gist.github.com/1201614
response_json = authoritarian.results(keyword, engine, locale, rank_date)
```

API DOCUMENTATION

```
authoritarian.initialise (api_key, account_id=None)  
authoritarian.account_status ()  
authoritarian.search (keyword, engine, locale, immediate=False)  
authoritarian.results (keyword, engine, locale, rank_date)
```
